## Abstract of the Disclosure

A charge control agent of the present invention comprises aggregate particles of an azo-type iron complex salt represented by the following chemical formula [I]

5

10

$$\begin{bmatrix} R^{5} & R^{4} & R^{3} & R^{2} & R^{2} & R^{2} & R^{3} & R^{4} & R^{2} & R^{2} & R^{4} & R^{2} & R^{4} & R^{2} & R^{4} & R^$$

in the chemical formula [I],  $R^1$ -,  $R^2$ -,  $R^3$ -,  $R^4$ -,  $R^5$ - and  $R^6$ - are same or different to each other, n is 0.7 to 0.99,

the aggregate particles have an average particle size of 1 to 4 microns and an average particle size of a primary particulate crystalline, that is fined the aggregate particles with ultrasonic irradiation, is at most 3 microns. A toner for developing an electrostatic image comprises a resin for the toner and the charge control agent.
